

ABSTRACT OF THE DISCLOSURE

A method of providing information regarding a location of a mobile user of a communication system is provided. The method comprises a step of performing measurement for provision of input data for a location calculation function. The method includes a step of analyzing the measurements to identify suspicious measurements. The method also comprises a step of deciding selected measurements for use by the location calculation function. The method also includes a step of calculating a location estimate for a mobile user based on the selected measurements.
